

ALLEGHENY COUNTY CLIMATE ACTION PLAN

A Regional Vision and Roadmap

Achieving Community Benefits Through Climate Action

With input from residents, community organizations, businesses, and government agencies, Allegheny County's Department of Sustainability is developing the county's first Climate Action Plan (CAP). The CAP outlines a regional vision to improve quality of life while reducing greenhouse gas (GHG) emissions and ensuring public dollars support efficient, sustainable county operations.

How will the CAP help to achieve a brighter future?

The CAP will help residents lower energy costs, improve transportation, protect natural spaces, enhance public health, create green jobs, and support local businesses — all while reducing harmful emissions. Through engagement with thousands of residents and more than 150 organizations in 2025, the following vision, values, and goals were established:

Our Vision:

An Allegheny County where all people thrive and have a healthy environment because we take climate action together, for our neighbors and for future generations

Our Goals:

- By 2050, Allegheny County will have healthy communities and environments, affordable energy, convenient transportation, healthy housing, and economic opportunity.
- Carbon neutrality for Allegheny County government operations as well as community-wide.

Our Values:

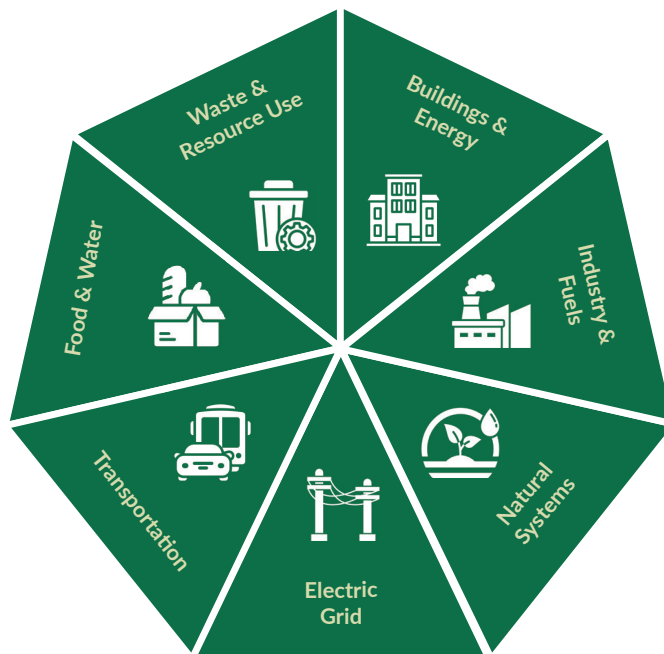

- **Healthy Communities and Healthy Environment:** Improving the health of people and local ecosystems
- **Equity and Inclusion:** Ensuring equitable access to climate solutions and empowering meaningful participation in decisions that prioritize underserved communities
- **Economic Opportunity:** Increasing economic prosperity by creating opportunities and lowering costs

Why this matters:

Allegheny County has the opportunity to achieve a healthier, more sustainable future for our region and beyond. Taking action to reduce GHG emissions while also improving quality of life is a win-win situation for people, ecosystems, and economies – both locally and globally.

The impacts of global warming are being felt locally. We're already seeing stronger storms, longer heat waves, food insecurity and increased flooding, especially for vulnerable communities. Together, we can build a brighter, more stable future.

Solutions across 7 focus areas

To learn more about the CAP process, including greenhouse gas emissions inventories, recordings of past public meetings, and more, visit:

TIMELINE

2025

● April – December

- Engaged 2,661 people directly across 106 events and meetings
- Formed internal and external steering committees
- Drafted community-informed vision & values
- Compiled county operations GHG inventory
- Compiled community-wide GHG inventory
- Hosted 4 community meetings

2026

● January – May

- Host Focus groups
- Convene Resident Leader Conversations
- Refine draft actions and strategies
- Prioritize actions and strategies

● May - June

- Host Community Meetings

● Late Summer

- Incorporate community feedback
- Develop Draft CAP

● August – November

- Finalize CAP
- Celebrate

**Launch
Climate Action Plan!**
