

AN APPALACHIAN MANUFACTURING ACTION PLAN

Transforming Central Appalachia into a Global
Leader for Sustainable Manufacturing

The 10 Pillars

Make it in Appalachia

Producing products for the clean energy economy

Reuse, Recycle, and Repurpose It

Optimizing and increasing commercial sales

Redevelop It

Transform shuttered coal plants and brownfields into "eco-industrial parks"

Decarbonize It

Reduce industrial emissions through electrification and efficiency

Buy It

Sustainable procurement / buying local

Build it with Appalachian Products

Leveraging strengths in low-carbon building materials like mass timber and green concrete

Work in Appalachia

Expanding union apprenticeships and ensuring strong labor standards

Grow it in Appalachia

Utilizing biofeedstocks for bioplastics and single-use alternatives

Invest in Appalachia

Connect communities with private and public investors

Policy Platform

A regional framework to support advanced manufacturing and community benefits

The Vision

To revitalize Central Appalachia by building on its industrial heritage to create a 21st-century hub for modernized, sustainable, and equitable manufacturing.

The A-MAP serves as a roadmap to ensure clean energy economy opportunities benefit local workers and communities rather than extracting wealth and leaving pollution behind.

Our Competitive Edge

- **Industrial Heritage:** History in key markets like primary metals, fabricated products, and chemicals.
- **Strategic Location:** Proximity to large consumer markets and world-class academic and research institutions.
- **Skilled Workforce:** Highly skilled base of manufacturing and trades workers.
- **Infrastructure:** Easy access to carbon-friendly freight rail and waterway networks, plus dozens of shuttered coal plant and steel plant sites ready for redevelopment.
- **Abundant Feedstocks:** Significant levels of waste materials (coal ash, acid mine drainage) and agricultural potential (hemp, sorghum).
